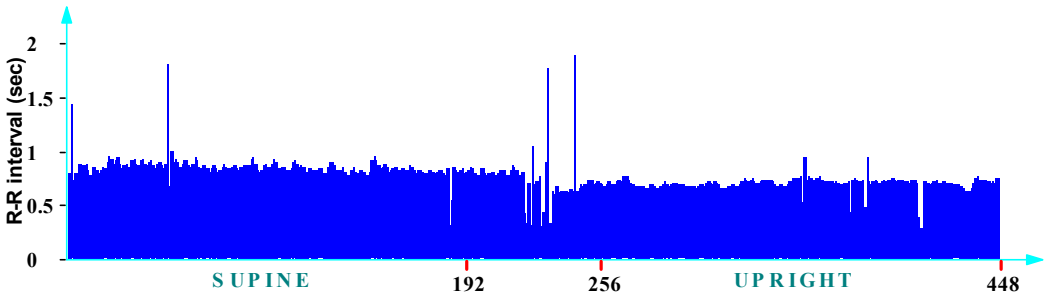
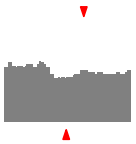
# Assessment of the Physical Fitness Level

**3/11/2026 5:08:26 PM**



## Assessment of the transition period

Min HR - 80



Max HR - 95

| | |
|---|---|
| **Chronotropic reaction**<br>HR (supine) / Max HR | 0.74 |
| **Compensation response**<br>Min HR / Max HR | 0.84 |
| **Ortho-Test Ratio**<br>RR average Supine vs RR average Upright | 1.21 |

## Conclusion :

CHRONOTROPIC REACTION DECREASES MODERATELY IN RESPONSE TO ORTHOTEST WHILE VASCULAR COMPENSATION IS ABSENT

| Orthotest | Valsalva Maneuver combined with Deep Breathing |
|---|---|
| **There is a mild PSNS Hyper-Regulation in response to the orthostatic intervention.**<br>**Autonomic Nervous system activity is within the negative PSNS zone.**<br>**There is a mild Sympathetic Hyper-Regulation in response to the orthostatic intervention.** | **Deep breathing vs. Normal breathing shows negative changes by the Parasympathetic activity.**<br>**Deep breathing vs. Normal breathing slightly elevates the Sympathetic activity.**<br>**Valsalva ratio is on an average level.** |

## Summary

**Valsalva maneuver combined with Deep breathing shows a slight reserve of the Sympathoadrenergic function.**
**Baroreceptors sensitivity is on an average level.**
**There is a slightly decreased level of adaptability**
**There is a possibility of the beginning stage of some chronic problems.**

* **Final decision can be made ONLY by combining ANS assessment conclusions with clinical data!**
