Interpretation of ANS assessment based on Heart Rate Variability

Orthotest	Valsalva Maneuver combined with Deep Breathing
There is a mild PSNS Hyper-Regulation in response to the orthostatic intervention. **Autonomic Nervous system activity is within the negative PSNS zone.** **There is a mild Sympathetic Hyper-Regulation in response to the orthostatic intervention.**	**Deep breathing vs. Normal breathing shows negative changes by the Parasympathetic activity.** **Deep breathing vs. Normal breathing slightly elevates the Sympathetic activity.** **Valsalva ratio is on an average level.**

Summary

Valsalva maneuver combined with Deep breathing shows a slight reserve of the Sympathoadrenergic function.
Baroreceptors sensitivity is on an average level.
There is a slightly decreased level of adaptability
There is a possibility of the beginning stage of some chronic problems.
