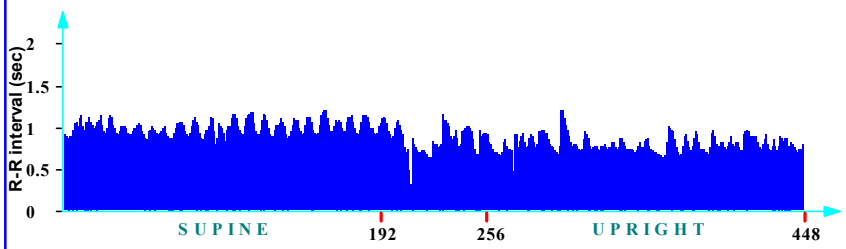
# Assessment of the Physical Fitness Level

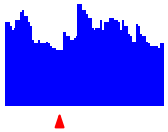
**9/17/2025 9:40:00 AM**



Transition

## Assessment of the transition period

Min HR - 52



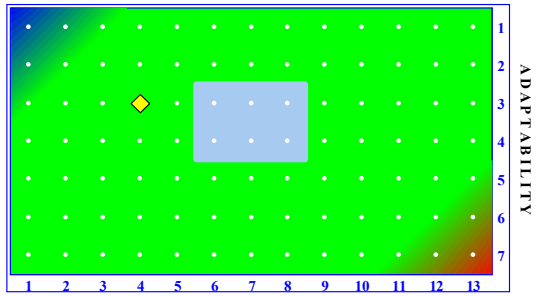
Max HR - 94

| | |
|---|---|
| **Chronotropic reaction**<br>HR (supine) / Max HR | 0.62 |
| **Compensation response**<br>Min HR / Max HR | 0.64 |
| **Ortho-Test Ratio**<br>RR average Supine vs RR average Upright | 1.23 |

## Conclusion :

TRANSITION IS CLOSE TO THE NORMAL PARAMETERS

## Graphical Presentation of the Physical Fitness



13 Levels of functioning of the Physiological systems

1/1 - The best Physical Fitness

13/7 - The worst Physical Fitness

- Athletic zone
- Normal zone
- Below normal
- Current Physical Fitness

## Physical Fitness Level - 4/3

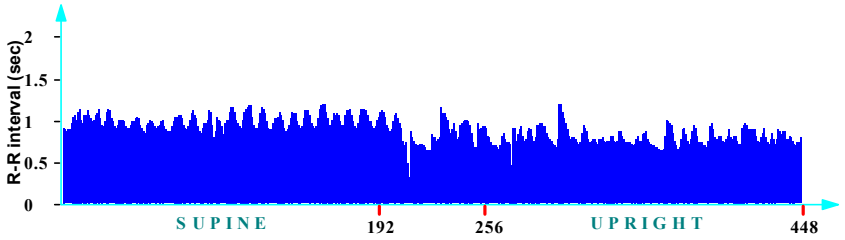
# Assessment of ANS functional state based on Heart Rate Variability analysis

9/17/2025 9:40:00 AM

## Electrocardiographic Rhythm Strip



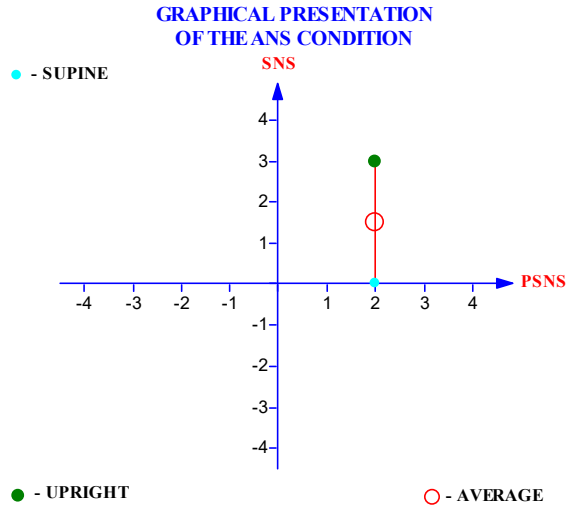
| HR | R(HF) | R(LF1) | R(LF2) |
|---|---|---|---|
| 59 | 14 | 6 | 14 |

| HR | R(HF) | R(LF1) | R(LF2) |
|---|---|---|---|
| 73 | 14 | 7 | 11 |

### Extrasystoles analysis

Single extrasystoles.

| ANS ASSESSMENT (SUPINE) | ANS ASSESSMENT (UPRIGHT) |
|---|---|
| INFLUENCE OF PARASYMPATHETIC SYSTEM PREVAILS MODERATELY WHILE SYMPATHETIC ACTIVITY ON AVERAGE LEVEL | PARASYMPATHETIC SYSTEM IS INCREASED MODERATELY WHILE SYMPATHETIC IS INCREASED SIGNIFICANTLY |



## CONCLUSION

2.0 - ACTIVITY OF PARASYMPATHETIC SYSTEM

1.5 - ACTIVITY OF SYMPATHETIC SYSTEM

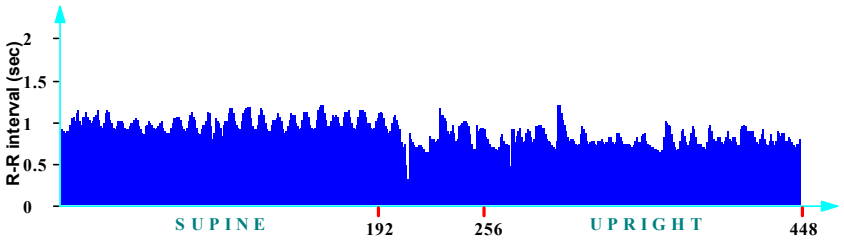
# *Physical Fitness evaluation based on Heart Rate Variability analysis*

**9/17/2025 9:40:00 AM**

**Electrocardiographic Rhythm Strip**



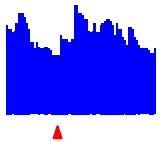
| HR | SDNN | TI | SC1 | SC2 | SC3 |
|---|---|---|---|---|---|
| 59 | 87 | 27 | 8 | 8 | 13 |

| HR | SDNN | TI | SC1 | SC2 | SC3 |
|---|---|---|---|---|---|
| 73 | 97 | 41 | 8 | 9 | 12 |

**Extrasystoles analysis**

Single extrasystoles.

max



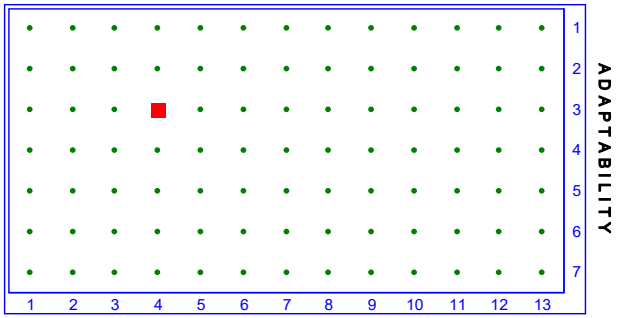
min

**Transition parameters**

| ChMR | 30/15 | Iot |
|---|---|---|
| 0.62 | 0.64 | 1.23 |

| Parameters of Optimal Variability | Equilibrium Assessment |
|---|---|
| POV (SUPINE) = 31<br>POV (UPRIGHT) = 31 | Index of discrepancy = -1 |

## *Current Physical Fitness - 4/3*



13 LEVELS OF FUNCTIONING OF THE PHYSIOLOGICAL SYSTEMS

**Point (1/1) - The best possible Physical Fitness**

**Point (13/7) - The worst possible Physical Fitness**

## CONCLUSION

THE FUNCTIONING OF PHYSIOLOGICAL SYSTEMS IS CLOSE TO THE SIGNIFICANTLY INCREASED LEVEL, WHILE THE ADAPTATION RESERVE IS AT THE AVERAGE LEVEL

# *Interpretation of ANS assessment based on Heart Rate Variability*

**9/17/2025 9:40:00 AM**

| Orthotest | Valsalva Maneuver combined with Deep Breathing |
|---|---|
| Autonomic Nervous system activity is within the positive PSNS zone, b there is a moderate SNS imbalance.<br>There is a moderate Sympathetic Hyper-Regulation in response to the orthostatic intervention.<br>THE PSNS PORTION OF THE AUTONOMIC NERVOUS SYSTEM IS STABLE. | Deep breathing vs. Normal breathing moderately elevates Sympathetic activity.<br>Deep breathing vs. Normal breathing shows no changes by the Parasympathetic activity.<br>Valsalva ratio is on an average level. |

## Summary

The moderate SNS Hyper-Regulation during the orthostatic intervention is within the normal physiologic range.
Valsalva maneuver combined with Deep breathing shows a moderate reserve of Sympathoadrenergic function.
Baroreceptors sensitivity is on an average level.
Autonomic function is within the normal physiologic range.
There is a normally trained person

* Final decision can be made ONLY by combining ANS assessment conclusions with clinical data!
