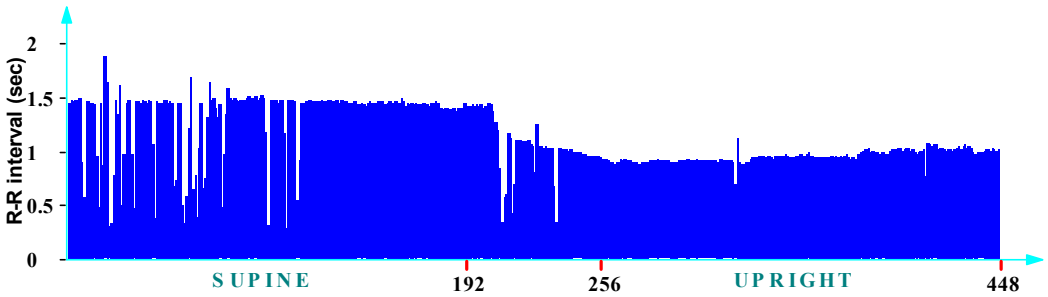
Assessment of the Physical Fitness Level

11/19/2025 11:48:04 AM



Assessment of the transition period

Min HR - 65

Max HR - 67

Chronotropic reaction HR (supine) / Max HR	0.60
Compensation response Min HR / Max HR	0.92
Ortho-Test Ratio RR average Supine vs RR average Upright	1.52

Conclusion :

VASCULAR COMPENSATION DECREASES SHARPLY IN RESPONSE TO ORTHOTEST
WHILE CHRONOTROPIC REACTION IS CLOSE TO THE NORMAL PARAMETERS

Interpretation of ANS assessment based on Heart Rate Variability

11/19/2025 11:48:04 AM

Orthotest	Valsalva Maneuver combined with Deep Breathing
Autonomic Nervous system activity is within the negative PSNS zone. Sharp decrease of SNS is within the negative PSNS zone. There is a severe Sympathetic Hyper-Regulation in response to the orthostatic intervention. THE PSNS PORTION OF THE AUTONOMIC NERVOUS SYSTEM IS BLOCK.	**Deep breathing vs. Normal breathing slightly elevates the Parasympathetic activity. Deep breathing vs. Normal breathing sharply elevates Sympathetic activity.**

Summary

There is a sharp evidence of Age related degeneration on Autonomic Nervous Centrum activity.
Valsalva test compared with Orthostatic test shows a slight improvement of the Parasympathetic function.
There is a possibility of some chronic problems.
