Interpretation of ANS assessment based on Heart Rate Variability

1/8/2026 3:32:56 PM

Orthotest	Valsalva Maneuver combined with Deep Breathing
Autonomic Nervous system activity is within the negative PSNS zone. THE PSNS PORTION OF THE AUTONOMIC NERVOUS SYSTEM IS BLOCK.	**Deep breathing vs. Normal breathing shows no improvement by the Parasympathetic activity.** **Deep breathing vs. Normal breathing slightly elevates the Sympathetic activity.** **Valsalva ratio is on an average level.**

Summary

Valsalva maneuver combined with Deep breathing shows a slight reserve of the Sympathoadrenergic function.
Baroreceptors sensitivity is on an average level.
There is a significantly decreased level of adaptability
There is a possibility of the beginning stage of some chronic problems.
