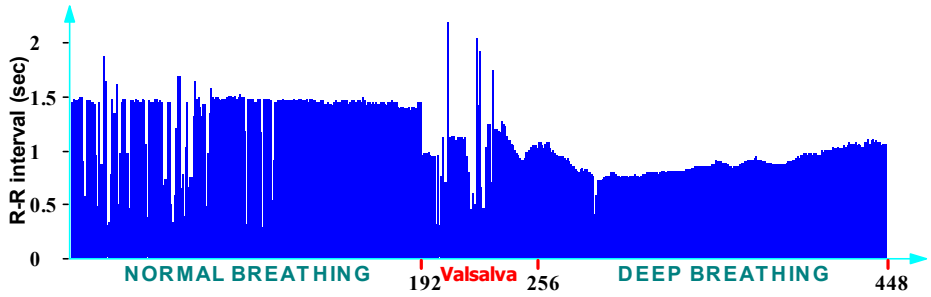
Assessment of ANS function during Valsalva Maneuver combined with Deep Breathing

11/19/2025 11:56:32 AM

Electrocardiographic Rhythm Strip



HR	R(HF)	R(LF1)	R(LF2)
41	28	29	30

Valsalva Maneuver

HR	R(HF)	R(LF1)	R(LF2)
66	29	29	24

Extrasystoles analysis

Single extrasystoles.

max

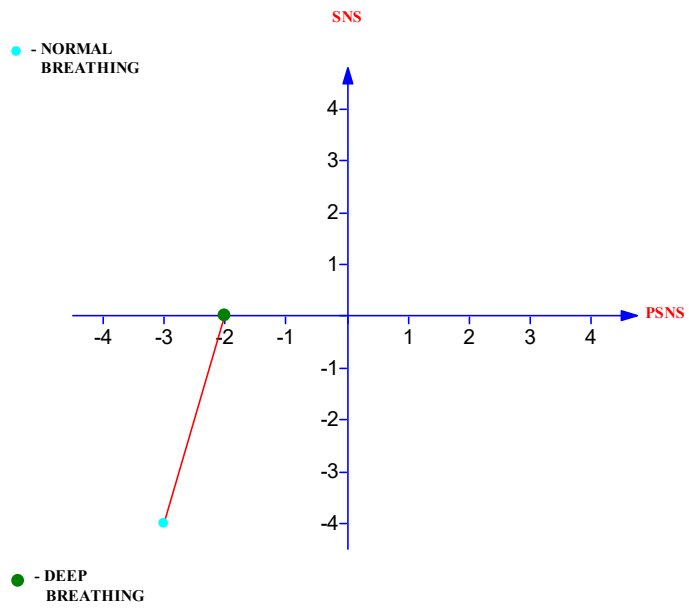
min

- Athletic level (>1.7)
- Average level (1.3 - 1.7)
- Low level (<1.3)

Valsalva Ratio **1.19**

E/I Ratio **1.06**

GRAPHICAL PRESENTATION OF THE ANS CONDITION



ANS ASSESSMENT (NORMAL BREATHING)	ANS ASSESSMENT (DEEP BREATHING)
PARASYMPATHETIC SYSTEM IS DECREASED SIGNIFICANTLY WHILE SYMPATHETIC IS DECREASED SHARPLY	PARASYMPATHETIC SYSTEM IS DECREASED MODERATELY WHILE SYMPATHETIC ACTIVITY ON AVERAGE LEVEL

Normal Breathing

BP	PP	MAP
N/A	N/A	N/A

Deep Breathing

BP	PP	MAP
N/A	N/A	N/A

Interpretation of ANS assessment based on Heart Rate Variability

11/19/2025 11:56:32 AM

Orthotest	Valsalva Maneuver combined with Deep Breathing
Autonomic Nervous system activity is within the negative PSNS zone. Sharp decrease of SNS is within the negative PSNS zone. There is a severe Sympathetic Hyper-Regulation in response to the orthostatic intervention. THE PSNS PORTION OF THE AUTONOMIC NERVOUS SYSTEM IS BLOCK.	**Deep breathing vs. Normal breathing slightly elevates the Parasympathetic activity. Deep breathing vs. Normal breathing sharply elevates Sympathetic activity.**

Summary

There is a sharp evidence of Age related degeneration on Autonomic Nervous Centrum activity.
Valsalva test compared with Orthostatic test shows a slight improvement of the Parasympathetic function.
There is a possibility of some chronic problems.

* **Final decision can be made ONLY by combining ANS assessment conclusions with clinical data!**
