Interpretation of ANS assessment based on Heart Rate Variability

1/5/2026 11:35:02 AM

Orthotest	Valsalva Maneuver combined with Deep Breathing
Autonomic Nervous system activity is within the negative PSNS zone. THE PSNS PORTION OF THE AUTONOMIC NERVOUS SYSTEM IS BLOCK.	Deep breathing vs. Normal breathing shows no improvement by the Parasympathetic activity. Deep breathing vs. Normal breathing shows no changes by the Sympathetic activity. Valsalva ratio is on an average level.

Summary

Baroreceptors sensitivity is on an average level.
There is a significantly decreased level of adaptability
There is a possibility of some chronic problems.

* Final decision can be made ONLY by combining ANS assessment conclusions with clinical data!
