Transition

Assessment of the transition period

Min HR - 80

Max HR - 87

Chronotropic reaction HR (supine) / Max HR	0.90
Compensation response Min HR / Max HR	0.93
Ortho-Test Ratio RR average Supine vs RR average Upright	1.08

Conclusion :

CHRONOTROPIC REACTION DECREASES SHARPLY IN RESPONSE TO ORTHOTEST WHILE VASCULAR COMPENSATION IS ABSENT

Interpretation of ANS assessment based on Heart Rate Variability

8/12/2025 5:06:27 PM

Orthotest	Valsalva Maneuver combined with Deep Breathing
Sympathetic activity is slightly elevated. **Autonomic Nervous system activity is within the negative PSNS zone.** **THE PSNS PORTION OF THE AUTONOMIC NERVOUS SYSTEM IS STABLE.**	**Deep breathing vs. Normal breathing shows negative changes by the Parasympathetic activity.** **Valsalva ratio is on an average level.**

Summary

There is a slightly increased stress level.
Baroreceptors sensitivity is on an average level.
There is a sharply decreased level of adaptability
There is a possibility of some chronic problems.

* **Final decision can be made ONLY by combining ANS assessment conclusions with clinical data!**
