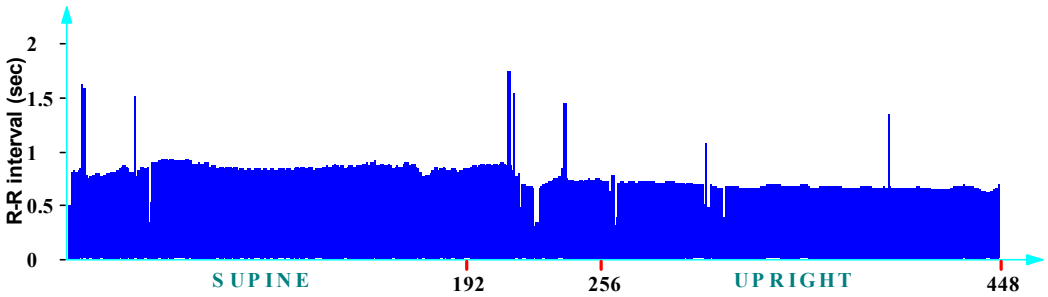
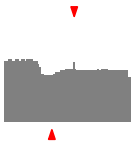
Assessment of the Physical Fitness Level

1/5/2026 10:21:10 AM



Assessment of the transition period

Min HR - 71



Max HR - 89

Chronotropic reaction HR (supine) / Max HR	0.78
Compensation response Min HR / Max HR	0.86
Ortho-Test Ratio RR average Supine vs RR average Upright	1.26

Conclusion :

CHRONOTROPIC REACTION DECREASES SIGNIFICANTLY IN RESPONSE TO ORTHOTEST WHILE VASCULAR COMPENSATION IS ABSENT

Interpretation of ANS assessment based on Heart Rate Variability

1/5/2026 10:21:10 AM

Orthotest	Valsalva Maneuver combined with Deep Breathing
Autonomic Nervous system activity is within the negative PSNS zone. There is a mild Sympathetic Hyper-Regulation in response to the orthostatic intervention.	**Deep breathing vs. Normal breathing shows no improvement by the Parasympathetic activity.**

Summary

There is an evidence of significantly decreased sensitivity of Parasympathetic receptors.
There is a significantly decreased level of adaptability
There is a possibility of some chronic problems.

* **Final decision can be made ONLY by combining ANS assessment conclusions with clinical data!**
