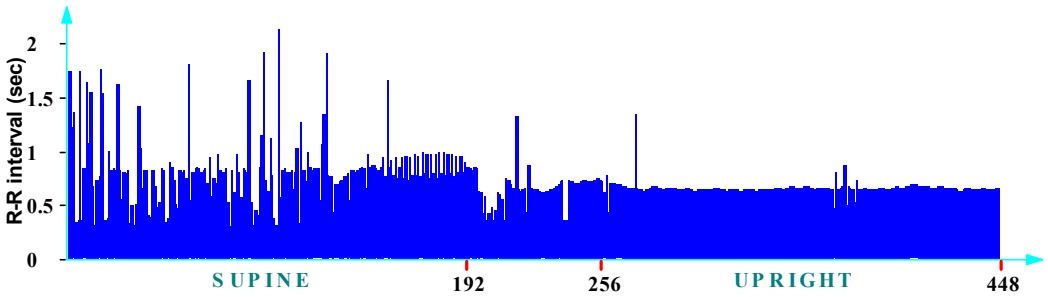
Assessment of the Physical Fitness Level

12/29/2025 11:50:28 AM



Assessment of the transition period

Min HR - 76

Max HR - 96

Chronotropic reaction HR (supine) / Max HR	0.75
Compensation response Min HR / Max HR	0.88
Ortho-Test Ratio RR average Supine vs RR average Upright	1.24

Conclusion :

CHRONOTROPIC REACTION DECREASES MODERATELY IN RESPONSE TO ORTHOTEST WHILE VASCULAR COMPENSATION IS ABSENT

Interpretation of ANS assessment based on Heart Rate Variability

12/29/2025 11:50:28 AM

Orthotest	Valsalva Maneuver combined with Deep Breathing
Sympathetic activity is slightly elevated. Autonomic Nervous system activity is within the negative PSNS zone.	Deep breathing vs. Normal breathing moderately elevates the Parasympathetic activity. Deep breathing vs. Normal breathing shows no changes by the Sympathetic activity. Valsalva ratio is on an average level.

Summary

There is a slightly increased stress level.
Baroreceptors sensitivity is on an average level.
Valsalva test compared with Orthostatic test shows a moderate improvement of the Parasympathetic function.
There is a slightly decreased level of adaptability
There is a possibility of some chronic problems.
