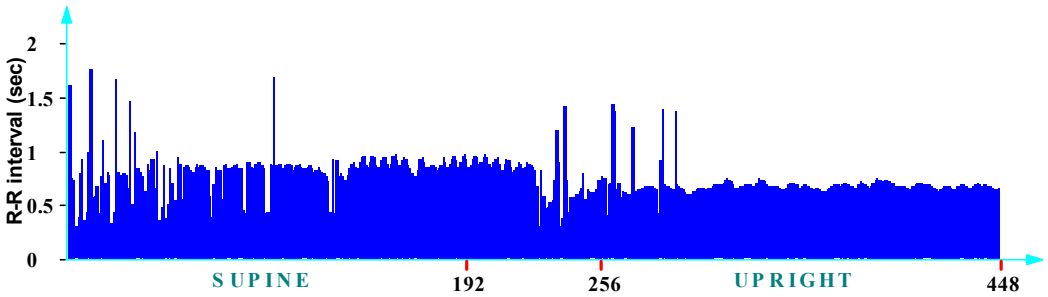
Assessment of the Physical Fitness Level

12/30/2025 4:29:41 PM



Assessment of the transition period

Min HR - 42

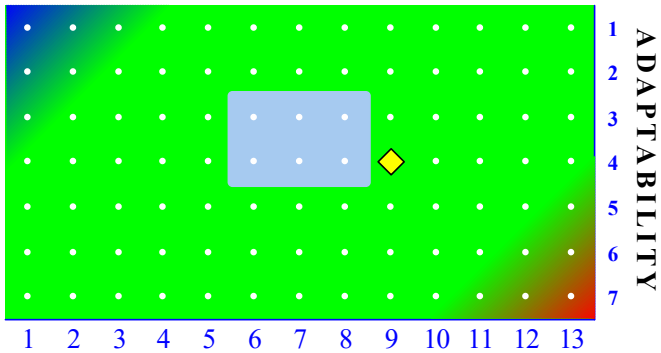
Max HR - 103

Chronotropic reaction HR (supine) / Max HR	0.67
Compensation response Min HR / Max HR	0.71
Ortho-Test Ratio RR average Supine vs RR average Upright	1.27

Conclusion :

CHRONOTROPIC REACTION SLIGHTLY DECREASES IN RESPONSE TO ORTHOTEST WHILE VASCULAR COMPENSATION DECREASES MODERATELY

Graphical Presentation of the Physical Fitness



13 Levels of functioning of the Physiological systems

1/1 - The best Physical Fitness

13/7 - The worst Physical Fitness

- Athletic zone
- Normal zone
- Below normal
- Current Physical Fitness

Physical Fitness Level - 9/4

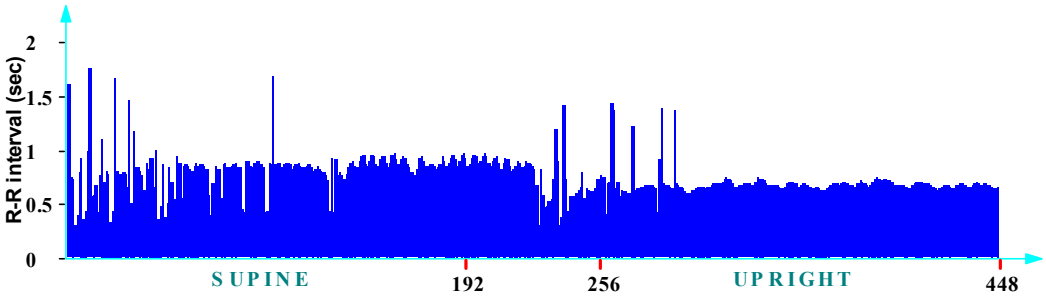
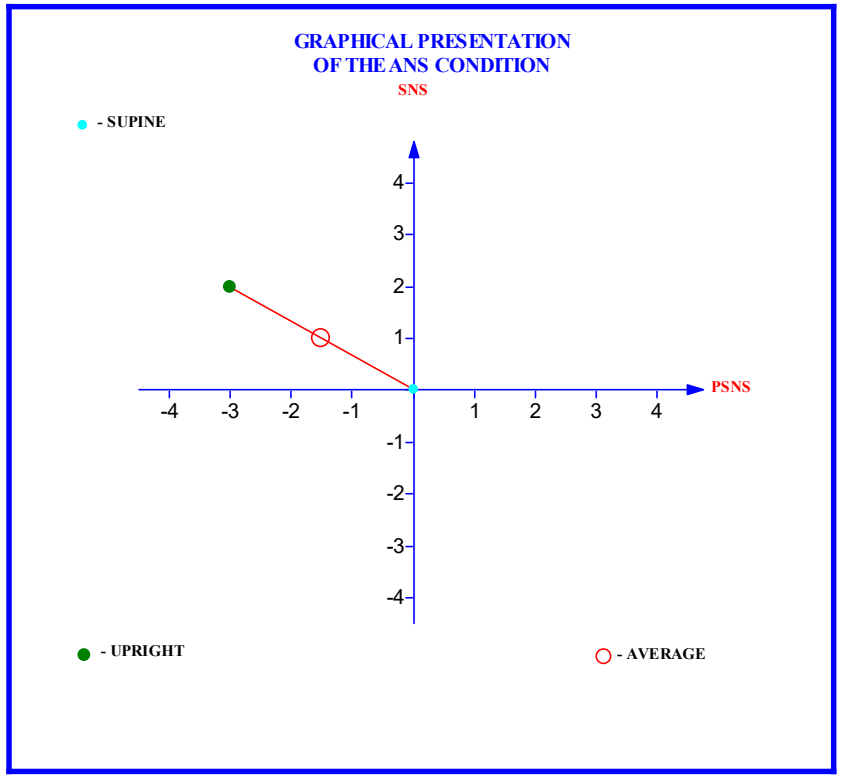
Assessment of ANS functional state based on Heart Rate Variability analysis

12/30/2025 4:29:41 PM

Electrocardiographic Rhythm Strip





HR	R(HF)	R(LF1)	R(LF2)
69	21	26	28

HR	R(HF)	R(LF1)	R(LF2)
88	26	28	29

Extrasystoles analysis

Single extrasystoles.

Supine

BP	PP	MAP
N/A	N/A	N/A

Upright

BP	PP	MAP
N/A	N/A	N/A

ANS ASSESSMENT (SUPINE)	ANS ASSESSMENT (UPRIGHT)
AUTONOMIC BALANCE ON AVERAGE LEVEL	PARASYMPATHETIC SYSTEM IS DECREASED SIGNIFICANTLY WHILE SYMPATHETIC IS INCREASED MODERATELY

CONCLUSION

- 1.5 - ACTIVITY OF PARASYMPATHETIC SYSTEM

1.0 - ACTIVITY OF SYMPATHETIC SYSTEM

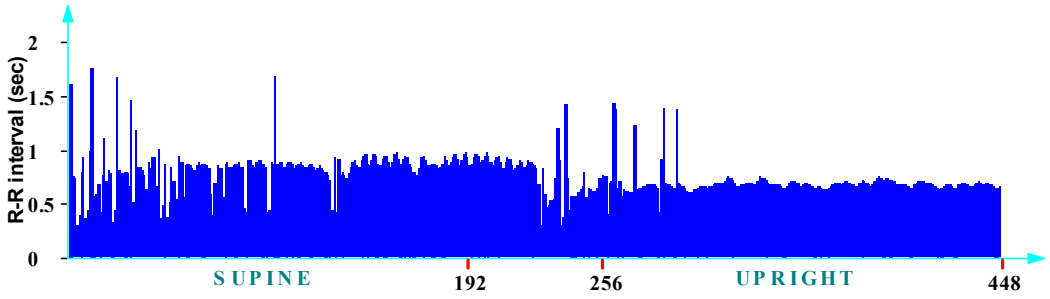
Physical Fitness evaluation based on Heart Rate Variability analysis

12/30/2025 4:29:41 PM

Electrocardiographic Rhythm Strip



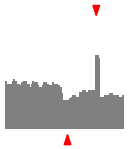
HR	SDNN	TI	SC1	SC2	SC3
69	32	251	11	14	7

HR	SDNN	TI	SC1	SC2	SC3
88	18	444	14	15	3

Extrasystoles analysis

Single extrasystoles.

max



min

Transition parameters

ChMR	30/15	Iot
0.67	0.71	1.27

Parameters of Optimal Variability

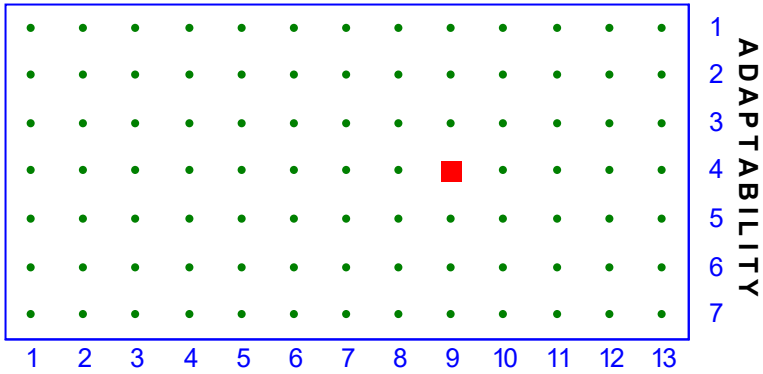
POV (SUPINE) = 17

POV (UPRIGHT) = 4

Equilibrium Assessment

Index of discrepancy = 5

Current Physical Fitness- 9/4



13 LEVELS OF FUNCTIONING OF THE PHYSIOLOGICAL SYSTEMS

Point (1/1) - The best possible Physical Fitness

Point (13/7) - The worst possible Physical Fitness

CONCLUSION

THE FUNCTIONING OF PHYSIOLOGICAL SYSTEMS IS SLIGHTLY REDUCED, WHILE THE ADAPTATION RESERVE IS SLIGHTLY REDUCED

Interpretation of ANS assessment based on Heart Rate Variability

12/30/2025 4:29:41 PM

Orthotest	Valsalva Maneuver combined with Deep Breathing
There is a mild Sympathetic Hyper-Regulation in response to the orthostatic intervention. **There is a moderate PSNS Hyper-Regulation in response to the orthostatic intervention.**	**Deep breathing vs. Normal breathing shows negative changes by the Parasympathetic activity.** **Deep breathing vs. Normal breathing moderately elevates Sympathetic activity.** **Valsalva ratio is on a high level.**

Summary

Valsalva maneuver combined with Deep breathing shows a moderate reserve of Sympathoadrenergic function.
Baroreceptors sensitivity is on a high level.
Moderate or severe PSNS Hyper-Regulation during orthostatic test is related for up to 80% of cases with gastrointestinal(GI) system problems and up to 20% with syncope, dizziness and vestibular deregulation.
NOTE: High correlation of the PSNS imbalance with GI system problems is based on a highly involving Vagus nerve activity in GI system innervations.
There is a possibility of the beginning stage of some chronic problems.

* **Final decision can be made ONLY by combining ANS assessment conclusions with clinical data!**
