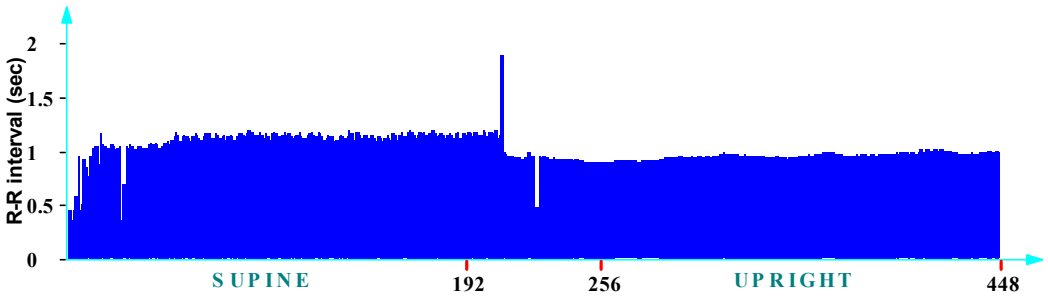
Assessment of the Physical Fitness Level

1/8/2026 4:28:05 PM



Assessment of the transition period

Min HR - 66

Max HR - 67

Chronotropic reaction HR (supine) / Max HR	0.78
Compensation response Min HR / Max HR	0.92
Ortho-Test Ratio RR average Supine vs RR average Upright	1.16

Conclusion :

CHRONOTROPIC REACTION DECREASES SIGNIFICANTLY IN RESPONSE TO ORTHOTEST WHILE VASCULAR COMPENSATION IS ABSENT

Interpretation of ANS assessment based on Heart Rate Variability

1/8/2026 4:28:05 PM

Orthotest	Valsalva Maneuver combined with Deep Breathing
There is a mild PSNS Hyper-Regulation in response to the orthostatic intervention. **Autonomic Nervous system activity is within the negative PSNS zone.** **Significant decrease of SNS is within the negative PSNS zone.** **There is a mild Sympathetic Hyper-Regulation in response to the orthostatic intervention.**	**Deep breathing vs. Normal breathing shows no improvement by the Parasympathetic activity.** **Deep breathing vs. Normal breathing moderately elevates Sympathetic activity.**

Summary

There is a significantly decreased level of adaptability
There is a possibility of the beginning stage of some chronic problems.

* **Final decision can be made ONLY by combining ANS assessment conclusions with clinical data!**
