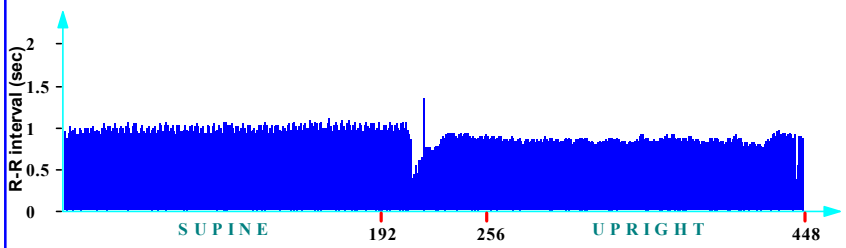
Assessment of the Physical Fitness Level

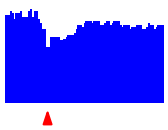
9/23/2025 3:31:23 PM



Transition

Assessment of the transition period

Min HR - 64



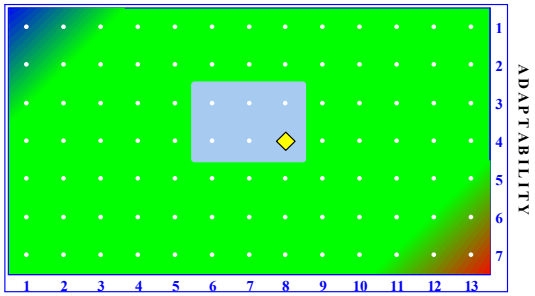
Max HR - 91

Chronotropic reaction HR (supine) / Max HR	0.64
Compensation response Min HR / Max HR	0.70
Ortho-Test Ratio RR average Supine vs RR average Upright	1.17

Conclusion :

COMMON REACTION DECREASES SLIGHTLY IN RESPONSE TO ORTHOTEST

Graphical Presentation of the Physical Fitness



13 Levels of functioning of the Physiological systems

1/1 - The best Physical Fitness

13/7 - The worst Physical Fitness

- Athletic zone
- Normal zone
- Below normal
- Current Physical Fitness

Physical Fitness Level - 8/4

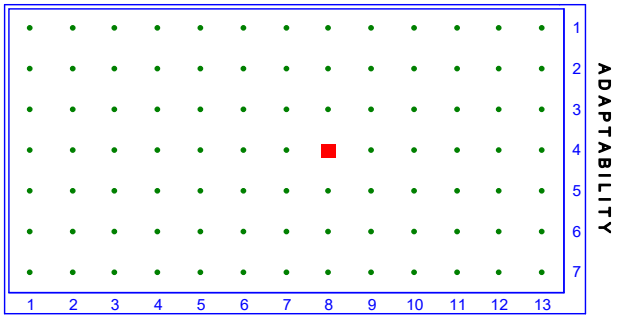
Transition parameters

ChMR	30/15	Iot
0.64	0.70	1.17

Parameters of Optimal Variability	Equilibrium Assessment
POV (SUPINE) = 19 POV (UPRIGHT) = 7	Index of discrepancy = 6

Current Physical Fitness - 8/4



13 LEVELS OF FUNCTIONING OF THE PHYSIOLOGICAL SYSTEMS

Point (1/1) - The best possible Physical Fitness

Point (13/7) - The worst possible Physical Fitness

CONCLUSION

THE FUNCTIONING OF PHYSIOLOGICAL SYSTEMS IS CLOSE TO THE AVERAGE LEVEL, WHILE THE ADAPTATION RESERVE IS SLIGHTLY REDUCED

Interpretation of ANS assessment based on Heart Rate Variability

9/23/2025 3:31:23 PM

Orthotest	Valsalva Maneuver combined with Deep Breathing
There is a moderate PSNS Hyper-Regulation in response to the orthostatic intervention.	Deep breathing vs. Normal breathing shows negative changes by the Parasympathetic activity. Deep breathing vs. Normal breathing slightly elevates the Sympathetic activity. Valsalva ratio is on an average level.

Summary

Valsalva maneuver combined with Deep breathing shows a slight reserve of the Sympathoadrenergic function.
Baroreceptors sensitivity is on an average level.
Autonomic function is close to the normal physiologic range.
There is a normally trained person
Moderate or severe PSNS Hyper-Regulation during orthostatic test is related for up to 80% of cases with gastrointestinal(GI) system problems and up to 20% with syncope, dizziness and vestibular deregulation.
NOTE: High correlation of the PSNS imbalance with GI system problems is based on a highly involving Vagus nerve activity in GI system innervations.

* Final decision can be made ONLY by combining ANS assessment conclusions with clinical data!
