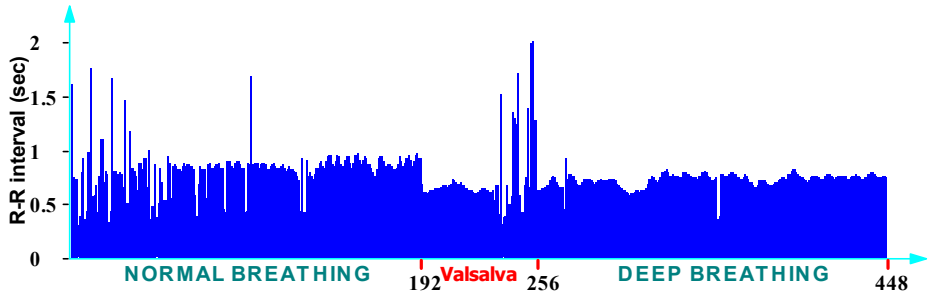
Assessment of ANS function during Valsalva Maneuver combined with Deep Breathing

12/30/2025 4:35:44 PM

Electrocardiographic Rhythm Strip



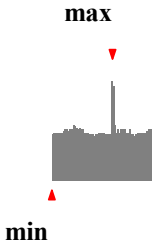
HR	R(HF)	R(LF1)	R(LF2)
69	21	26	28

Valsalva Maneuver

HR	R(HF)	R(LF1)	R(LF2)
84	25	26	21

Extrasystoles analysis

Single extrasystoles.

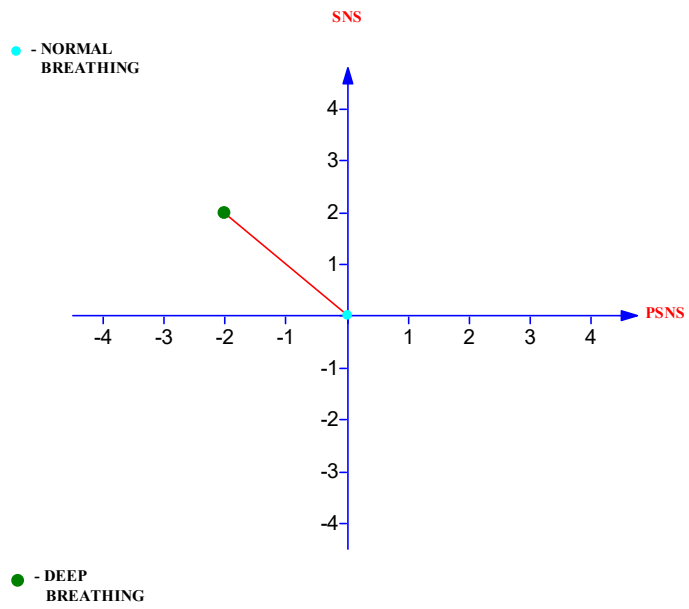


- Athletic level (>1.7)
- Average level (1.3 - 1.7)
- Low level (<1.3)

Valsalva Ratio 2.13

E/I Ratio 1.11

GRAPHICAL PRESENTATION OF THE ANS CONDITION



ANS ASSESSMENT (NORMAL BREATHING)	ANS ASSESSMENT (DEEP BREATHING)
AUTONOMIC BALANCE ON AVERAGE LEVEL	PARASYMPATHETIC SYSTEM IS DECREASED MODERATELY WHILE SYMPATHETIC IS INCREASED MODERATELY

Normal Breathing

BP	PP	MAP
N/A	N/A	N/A

Deep Breathing

BP	PP	MAP
N/A	N/A	N/A

Interpretation of ANS assessment based on Heart Rate Variability

12/30/2025 4:35:44 PM

Orthotest	Valsalva Maneuver combined with Deep Breathing
There is a mild Sympathetic Hyper-Regulation in response to the orthostatic intervention. **There is a moderate PSNS Hyper-Regulation in response to the orthostatic intervention.**	**Deep breathing vs. Normal breathing shows negative changes by the Parasympathetic activity.** **Deep breathing vs. Normal breathing moderately elevates Sympathetic activity.** **Valsalva ratio is on a high level.**

Summary

Valsalva maneuver combined with Deep breathing shows a moderate reserve of Sympathoadrenergic function.
Baroreceptors sensitivity is on a high level.
Moderate or severe PSNS Hyper-Regulation during orthostatic test is related for up to 80% of cases with gastrointestinal(GI) system problems and up to 20% with syncope, dizziness and vestibular deregulation.
NOTE: High correlation of the PSNS imbalance with GI system problems is based on a highly involving Vagus nerve activity in GI system innervations.
There is a possibility of the beginning stage of some chronic problems.

* **Final decision can be made ONLY by combining ANS assessment conclusions with clinical data!**
