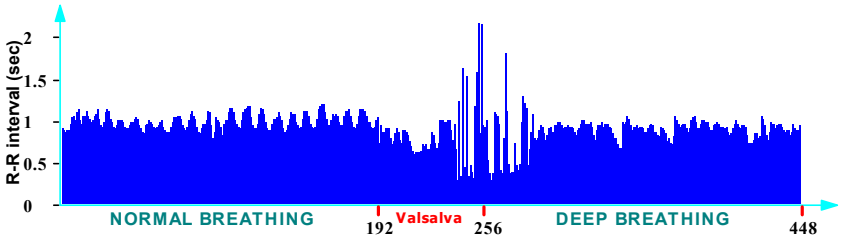
Assessment of ANS function during Valsalva Maneuver combined with Deep Breathing

9/17/2025 9:46:46 AM

Electrocardiographic Rhythm Strip



HR	R(HF)	R(LF1)	R(LF2)
59	14	6	14

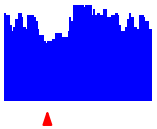
Valsalva Maneuver

HR	R(HF)	R(LF1)	R(LF2)
68	14	10	12

Extrasystoles analysis

Single extrasystoles.

max



min

- Athletic level (>1.7)
- Average level (1.3 - 1.7)
- Low level (<1.3)

Valsalva Ratio 1.65

E/I Ratio 1.19

ANS ASSESSMENT (NORMAL BREATHING)	ANS ASSESSMENT (DEEP BREATHING)
INFLUENCE OF PARASYMPATHETIC SYSTEM PREVAILS MODERATELY WHILE SYMPATHETIC ACTIVITY ON AVERAGE LEVEL	PARASYMPATHETIC SYSTEM IS INCREASED MODERATELY WHILE SYMPATHETIC IS INCREASED MODERATELY

GRAPHICAL PRESENTATION OF THE ANS CONDITION

Jennifer Rice

Interpretation of ANS assessment based on Heart Rate Variability

9/17/2025 9:46:46 AM

Orthotest	Valsalva Maneuver combined with Deep Breathing
Autonomic Nervous system activity is within the positive PSNS zone, b there is a moderate SNS imbalance. There is a moderate Sympathetic Hyper-Regulation in response to the orthostatic intervention. THE PSNS PORTION OF THE AUTONOMIC NERVOUS SYSTEM IS STABLE.	Deep breathing vs. Normal breathing moderately elevates Sympathetic activity. Deep breathing vs. Normal breathing shows no changes by the Parasympathetic activity. Valsalva ratio is on an average level.

Summary

The moderate SNS Hyper-Regulation during the orthostatic intervention is within the normal physiologic range.
Valsalva maneuver combined with Deep breathing shows a moderate reserve of Sympathoadrenergic function.
Baroreceptors sensitivity is on an average level.
Autonomic function is within the normal physiologic range.
There is a normally trained person

* Final decision can be made ONLY by combining ANS assessment conclusions with clinical data!
