Orthotest	Valsalva Maneuver combined with Deep Breathing
Autonomic Nervous system activity is within the negative PSNS zone. THE PSNS PORTION OF THE AUTONOMIC NERVOUS SYSTEM IS STABLE.	**Deep breathing vs. Normal breathing shows negative changes by the Parasympathetic activity.**

Summary

There is an evidence of significantly decreased sensitivity of Parasympathetic receptors.
There is a significantly decreased level of adaptability
There is a possibility of some chronic problems NOTE: It includes a possibility of chronic psycho-emotional problems.

* **Final decision can be made ONLY by combining ANS assessment conclusions with clinical data!**
