Assessment of the Physical Fitness Level

1/8/2026 3:26:19 PM

Assessment of the transition period

Min HR - 76

Max HR - 81

Chronotropic reaction HR (supine) / Max HR	0.82
Compensation response Min HR / Max HR	0.90
Ortho-Test Ratio RR average Supine vs RR average Upright	1.16

Conclusion :

CHRONOTROPIC REACTION DECREASES SIGNIFICANTLY IN RESPONSE TO ORTHOTEST WHILE VASCULAR COMPENSATION DECREASES SHARPLY

Interpretation of ANS assessment based on Heart Rate Variability

1/8/2026 3:26:19 PM

Orthotest	Valsalva Maneuver combined with Deep Breathing
Autonomic Nervous system activity is within the negative PSNS zone. THE PSNS PORTION OF THE AUTONOMIC NERVOUS SYSTEM IS BLOCK.	**Deep breathing vs. Normal breathing shows no improvement by the Parasympathetic activity.** **Deep breathing vs. Normal breathing slightly elevates the Sympathetic activity.** **Valsalva ratio is on an average level.**

Summary

Valsalva maneuver combined with Deep breathing shows a slight reserve of the Sympathoadrenergic function.
Baroreceptors sensitivity is on an average level.
There is a significantly decreased level of adaptability
There is a possibility of the beginning stage of some chronic problems.

* **Final decision can be made ONLY by combining ANS assessment conclusions with clinical data!**
