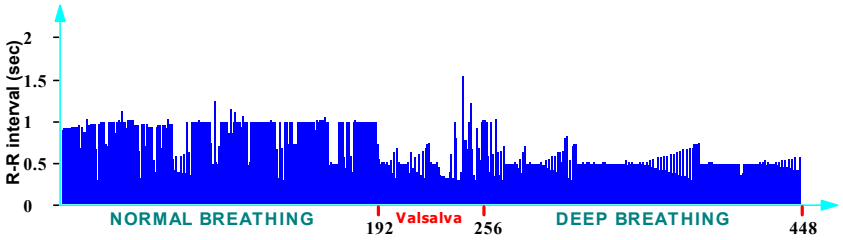
Assessment of ANS function during Valsalva Maneuver combined with Deep Breathing

5/2/2024 2:23:12 PM

Electrocardiographic Rhythm Strip



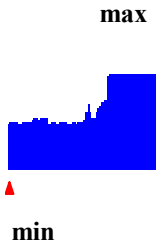
HR	R(HF)	R(LF1)	R(LF2)
61	30	30	30

Valsalva Maneuver

HR	R(HF)	R(LF1)	R(LF2)
121	28	30	29

Extrasystoles analysis

Trigeminy.
Bigeminy.
Single extrasystoles.



- Athletic level (>1.7)
- Average level (1.3 - 1.7)
- Low level (<1.3)

Valsalva Ratio 2.02

E/I Ratio 1.01

ANS ASSESSMENT (NORMAL BREATHING)	ANS ASSESSMENT (DEEP BREATHING)
PARASYMPATHETIC SYSTEM IS DECREASED SHARPLY WHILE SYMPATHETIC IS DECREASED SLIGHTLY	PARASYMPATHETIC SYSTEM IS DECREASED SIGNIFICANTLY WHILE SYMPATHETIC IS INCREASED SHARPLY

GRAPHICAL PRESENTATION OF THE ANS CONDITION

Interpretation of ANS assessment based on Heart Rate Variability

5/2/2024 2:23:12 PM

Orthotest	Valsalva Maneuver combined with Deep Breathing
Autonomic Nervous system activity is within the negative PSNS zone. Parasympathetic system activity is sharply decreased. There is a severe Sympathetic Hyper-Regulation in response to the orthostatic intervention. THE PSNS PORTION OF THE AUTONOMIC NERVOUS SYSTEM IS STABLE.	**Deep breathing vs. Normal breathing slightly elevates the Parasympathetic activity. Valsalva ratio is on a high level.**

Summary

Baroreceptors sensitivity is on a high level.
Valsalva test compared with Orthostatic test shows a slight improvement of the Parasympathetic function.
There is a possibility of some chronic problems.

* **Final decision can be made ONLY by combining ANS assessment conclusions with clinical data!**
