Interpretation of ANS assessment based on Heart Rate Variability

2/3/2026 3:13:48 PM

Orthotest	Valsalva Maneuver combined with Deep Breathing
Sympathetic activity is moderately elevated. Autonomic Nervous system activity is within the negative PSNS zone. Parasympathetic system activity is sharply decreased. THE PSNS PORTION OF THE AUTONOMIC NERVOUS SYSTEM IS BLOCK. THE SNS PORTION OF THE AUTONOMIC NERVOUS SYSTEM I SWITCHED.	Deep breathing vs. Normal breathing shows no improvement by the Parasympathetic activity. Deep breathing vs. Normal breathing shows a slight decrease of the Sympathetic activity. Valsalva ratio is on an average level.

Summary

There is a moderately increased stress level.
Deep breathing has slightly stabilized the Sympathetic function.
Baroreceptors sensitivity is on an average level.
There is a sharply decreased level of adaptability
There is a possibility of some chronic problems.
