Orthotest	Valsalva Maneuver combined with Deep Breathing
There is a mild PSNS Hyper-Regulation in response to the orthostatic intervention.	**Deep breathing vs. Normal breathing slightly elevates the Parasympathetic activity.** **Deep breathing vs. Normal breathing significantly elevates Sympathetic activity.** **Valsalva ratio is on an average level.**

Summary

Valsalva maneuver combined with Deep breathing shows a significant reserve of Sympathoadrenergic function.
Baroreceptors sensitivity is on an average level.
Valsalva test compared with Orthostatic test shows a slight improvement of the Parasympathetic function.
Autonomic function is within the normal physiologic range.
There is a normally trained person
