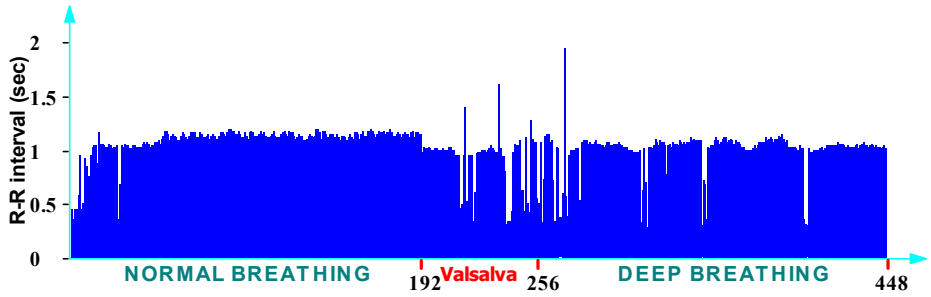
Assessment of ANS function during Valsalva Maneuver combined with Deep Breathing

1/8/2026 4:35:58 PM

Electrocardiographic Rhythm Strip



HR	R(HF)	R(LF1)	R(LF2)
53	25	29	29

Valsalva Maneuver

HR	R(HF)	R(LF1)	R(LF2)
57	27	29	24

Extrasystoles analysis

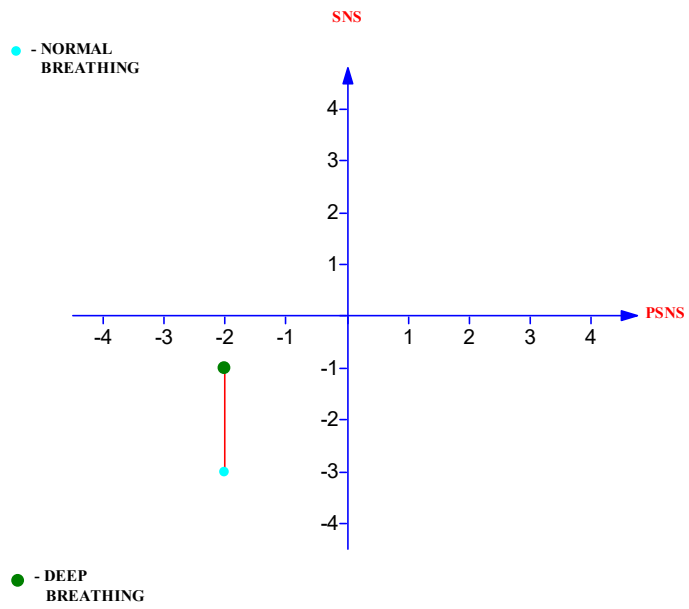
Single extrasystoles.

- Athletic level (>1.7)
- Average level (1.3 - 1.7)
- Low level (<1.3)

Valsalva Ratio **1.15**

E/I Ratio **1.06**

GRAPHICAL PRESENTATION OF THE ANS CONDITION



ANS ASSESSMENT (NORMAL BREATHING)	ANS ASSESSMENT (DEEP BREATHING)
PARASYMPATHETIC SYSTEM IS DECREASED MODERATELY WHILE SYMPATHETIC IS DECREASED SIGNIFICANTLY	PARASYMPATHETIC SYSTEM IS DECREASED MODERATELY WHILE SYMPATHETIC IS DECREASED SLIGHTLY

Normal Breathing

BP	PP	MAP
N/A	N/A	N/A

Deep Breathing

BP	PP	MAP
N/A	N/A	N/A

Rony Odisho

Interpretation of ANS assessment based on Heart Rate Variability

1/8/2026 4:35:58 PM

Orthotest	Valsalva Maneuver combined with Deep Breathing
There is a mild PSNS Hyper-Regulation in response to the orthostatic intervention. **Autonomic Nervous system activity is within the negative PSNS zone.** **Significant decrease of SNS is within the negative PSNS zone.** **There is a mild Sympathetic Hyper-Regulation in response to the orthostatic intervention.**	**Deep breathing vs. Normal breathing shows no improvement by the Parasympathetic activity.** **Deep breathing vs. Normal breathing moderately elevates Sympathetic activity.**

Summary

There is a significantly decreased level of adaptability
There is a possibility of the beginning stage of some chronic problems.

* **Final decision can be made ONLY by combining ANS assessment conclusions with clinical data!**
