Interpretation of ANS assessment based on Heart Rate Variability

12/3/2025 8:27:52 AM

Orthotest	Valsalva Maneuver combined with Deep Breathing
Sympathetic activity is slightly elevated. Autonomic Nervous system activity is within the negative PSNS zone. There is a slight prevalence of the Sympathetic activity. THE SNS AND PSNS PORTIONS OF THE AUTONOMIC NERVOU SYSTEM ARE BLOCK.	Deep breathing vs. Normal breathing shows no improvement by the Parasympathetic activity. Deep breathing vs. Normal breathing shows no changes by the Sympathetic activity. Valsalva ratio is on a high level.

Summary

Baroreceptors sensitivity is on a high level.
There is a slightly decreased level of adaptability
There is a possibility of the beginning stage of some chronic problems.

* Final decision can be made ONLY by combining ANS assessment conclusions with clinical data!
