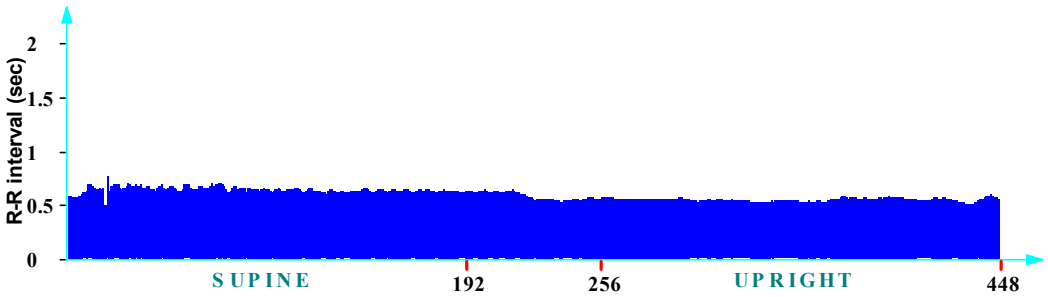
Assessment of the Physical Fitness Level

1/8/2026 2:54:36 PM



Assessment of the transition period

Min HR - 104

Max HR - 111

Chronotropic reaction HR (supine) / Max HR	0.84
Compensation response Min HR / Max HR	0.92
Ortho-Test Ratio RR average Supine vs RR average Upright	1.18

Conclusion :

CHRONOTROPIC REACTION DECREASES SHARPLY IN RESPONSE TO ORTHOTEST WHILE VASCULAR COMPENSATION IS ABSENT

Interpretation of ANS assessment based on Heart Rate Variability

1/8/2026 2:54:36 PM

Orthotest	Valsalva Maneuver combined with Deep Breathing
Sympathetic activity is moderately elevated. **There is a mild PSNS Hyper-Regulation in response to the orthostatic intervention.** **Autonomic Nervous system activity is within the negative PSNS zone.**	**Deep breathing vs. Normal breathing shows negative changes by the Parasympathetic activity.** **Valsalva ratio is on an average level.**

Summary

There is a moderately increased stress level.
Baroreceptors sensitivity is on an average level.
There is a sharply decreased level of adaptability
There is a possibility of some chronic problems.

* **Final decision can be made ONLY by combining ANS assessment conclusions with clinical data!**
