Interpretation of ANS assessment based on Heart Rate Variability

1/8/2026 2:59:09 PM

Orthotest	Valsalva Maneuver combined with Deep Breathing
Sympathetic activity is moderately elevated. There is a mild PSNS Hyper-Regulation in response to the orthostatic intervention. Autonomic Nervous system activity is within the negative PSNS zone.	Deep breathing vs. Normal breathing shows negative changes by the Parasympathetic activity. Valsalva ratio is on an average level.

Summary

There is a moderately increased stress level.
Baroreceptors sensitivity is on an average level.
There is a sharply decreased level of adaptability
There is a possibility of some chronic problems.
