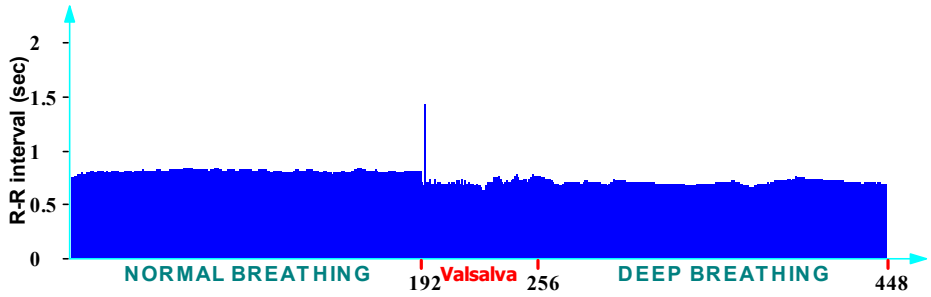
Assessment of ANS function during Valsalva Maneuver combined with Deep Breathing

11/11/2025 5:05:42 PM

Electrocardiographic Rhythm Strip



HR	R(HF)	R(LF1)	R(LF2)
73	30	30	30

Valsalva Maneuver

HR	R(HF)	R(LF1)	R(LF2)
84	30	30	28

Extrasystoles analysis

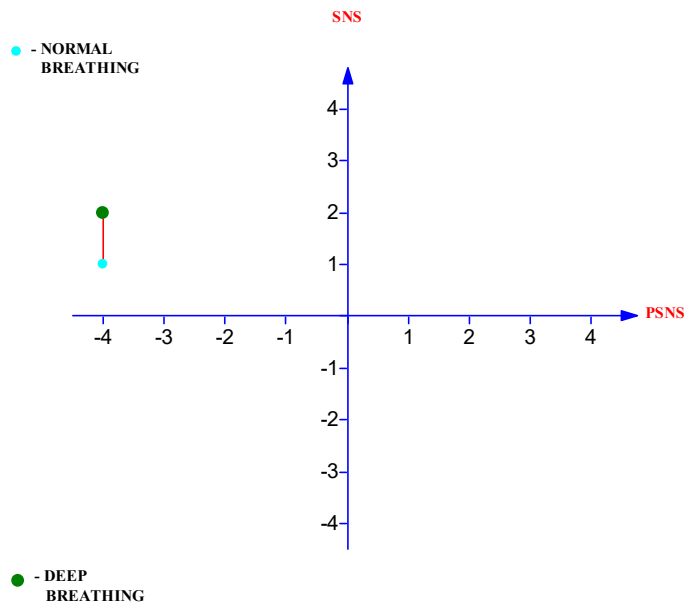
Extrasystoles not recognized

- Athletic level (>1.7)
- Average level (1.3 - 1.7)
- Low level (<1.3)

Valsalva Ratio 1.24

E/I Ratio 1.01

GRAPHICAL PRESENTATION OF THE ANS CONDITION



ANS ASSESSMENT (NORMAL BREATHING)	ANS ASSESSMENT (DEEP BREATHING)
PARASYMPATHETIC SYSTEM IS DECREASED SHARPLY WHILE SYMPATHETIC IS INCREASED SLIGHTLY	PARASYMPATHETIC SYSTEM IS DECREASED SHARPLY WHILE SYMPATHETIC IS INCREASED MODERATELY

Normal Breathing

BP	PP	MAP
N/A	N/A	N/A

Deep Breathing

BP	PP	MAP
N/A	N/A	N/A

Interpretation of ANS assessment based on Heart Rate Variability

11/11/2025 5:05:42 PM

Orthotest	Valsalva Maneuver combined with Deep Breathing
Sympathetic activity is slightly elevated. **Autonomic Nervous system activity is within the negative PSNS zone.** **THE PSNS PORTION OF THE AUTONOMIC NERVOUS SYSTEM IS SWITCHED.**	**Deep breathing vs. Normal breathing shows no improvement by the Parasympathetic activity.**

Summary

There is a slightly increased stress level.
There is a paradoxical response on orthostatic test: PSNS "Upright" is better than PSNS "Supine".
There is an evidence of significantly decreased sensitivity of Parasympathetic receptors.
There is a sharply decreased level of adaptability
There is a possibility of some chronic problems.

* **Final decision can be made ONLY by combining ANS assessment conclusions with clinical data!**
