Interpretation of ANS assessment based on Heart Rate Variability

2/24/2026 4:50:14 PM

Orthotest	Valsalva Maneuver combined with Deep Breathing
Autonomic Nervous system activity is within the negative PSNS zone. Moderate decrease of SNS is within the negative PSNS zone. There is a mild Sympathetic Hyper-Regulation in response to the orthostatic intervention.	**Deep breathing vs. Normal breathing shows no improvement by the Parasympathetic activity. Deep breathing vs. Normal breathing moderately elevates Sympathetic activity.**

Summary

There is a sharply decreased level of adaptability
There is a possibility of the beginning stage of some chronic problems.

* **Final decision can be made ONLY by combining ANS assessment conclusions with clinical data!**
