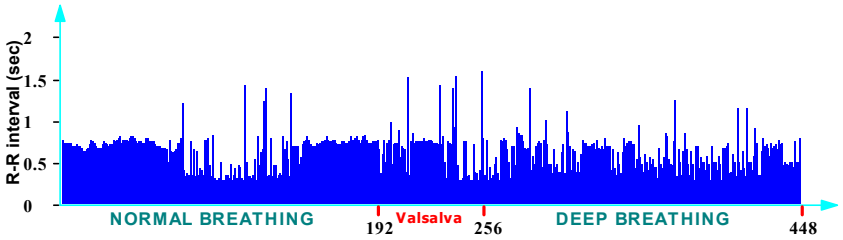
Assessment of ANS function during Valsalva Maneuver combined with Deep Breathing

8/31/2023 8:54:37 AM

Electrocardiographic Rhythm Strip



HR	R(HF)	R(LF1)	R(LF2)
87	19	11	1

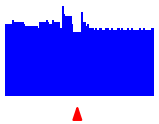
Valsalva Maneuver

HR	R(HF)	R(LF1)	R(LF2)
92	13	11	12

Extrasystoles analysis

Single extrasystoles.

max



min

- Athletic level (>1.7)
- Average level (1.3 - 1.7)
- Low level (<1.3)

Valsalva Ratio 1.31

E/I Ratio 1.27

ANS ASSESSMENT (NORMAL BREATHING)	ANS ASSESSMENT (DEEP BREATHING)
INFLUENCE OF SYMPATHETIC SYSTEM PREVAILS SIGNIFICANTLY WHILE PARASYMPATHETIC ON AVERAGE LEVEL	PARASYMPATHETIC SYSTEM IS INCREASED MODERATELY WHILE SYMPATHETIC IS INCREASED SIGNIFICANTLY

GRAPHICAL PRESENTATION OF THE ANS CONDITION

Ashley Birk

Interpretation of ANS assessment based on Heart Rate Variability

8/31/2023 8:54:37 AM

Orthotest	Valsalva Maneuver combined with Deep Breathing
Sympathetic activity is moderately elevated. There is a mild PSNS Hyper-Regulation in response to the orthostatic intervention. THE SNS PORTION OF THE AUTONOMIC NERVOUS SYSTEM I SWITCHED.	Deep breathing vs. Normal breathing moderately elevates the Parasympathetic activity. Deep breathing vs. Normal breathing shows no changes by the Sympathetic activity. Valsalva ratio is on an average level.

Summary

There is a moderately increased stress level.
Baroreceptors sensitivity is on an average level.
Valsalva test compared with Orthostatic test shows a moderate improvement of the Parasympathetic function.
Autonomic function is within the normal physiologic range.
There is a significantly decreased level of adaptability

* Final decision can be made ONLY by combining ANS assessment conclusions with clinical data!
