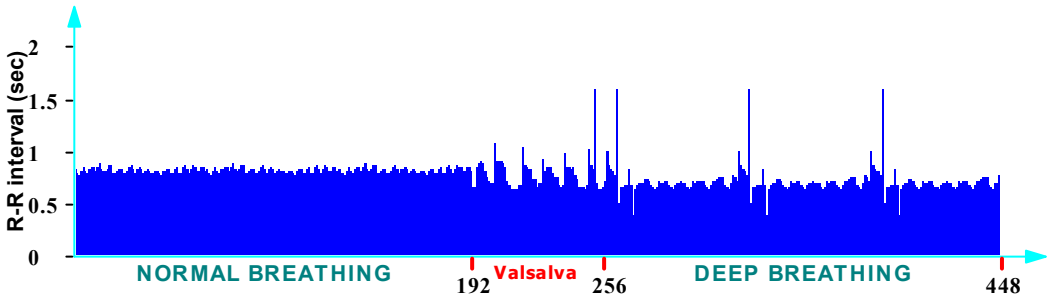
Assessment of ANS function during Valsalva Maneuver combined with Deep Breathing

6/11/2020 10:01:19 AM

Electrocardiographic Rhythm Strip



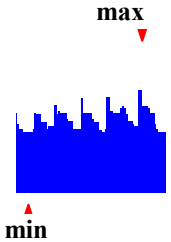
HR	R(HF)	R(LF1)	R(LF2)
72	23	29	29

Valsalva Maneuver

HR	R(HF)	R(LF1)	R(LF2)
81	17	13	19

Extrasystoles analysis

Extrasystoles not recognized



- Athletic level (>1.7)
- Average level (1.3 - 1.7)
- Low level (<1.3)

Valsalva Ratio 1.70

E/I Ratio 1.19

ANS ASSESSMENT (NORMAL BREATHING)	ANS ASSESSMENT (DEEP BREATHING)
HF(PSNS) is decreased slightly while LF(SNS) is increased slightly	HF(PSNS) is increased slightly while LF(SNS) is increased moderately

Interpretation of ANS assessment based on Heart Rate Variability

6/11/2020 10:01:19 AM

Orthotest	Valsalva Maneuver combined with Deep Breathing
Sympathetic activity is slightly elevated. There is a mild PSNS Hyper-Regulation in response to the orthostatic intervention. Autonomic Nervous system activity is within the negative PSNS zone.	Deep breathing vs. Normal breathing moderately elevates the Parasympathetic activity. Deep breathing vs. Normal breathing slightly elevates the Sympathetic activity. Valsalva ratio is on an average level.

Summary

There is a slightly increased stress level.
Valsalva maneuver combined with Deep breathing shows a slight reserve of the Sympathoadrenergic function.
Baroreceptors sensitivity is on an average level.
Valsalva test compared with Orthostatic test shows a moderate improvement of the Parasympathetic function.
There is a slightly decreased level of adaptability
