Interpretation of ANS assessment based on Heart Rate Variability

10/16/2024 10:07:09 AM

Orthotest	Valsalva Maneuver combined with Deep Breathing
Sympathetic activity is moderately elevated. Autonomic Nervous system activity is within the negative PSNS zone.	Deep breathing vs. Normal breathing shows no improvement by the Parasympathetic activity. Deep breathing vs. Normal breathing slightly elevates the Sympathetic activity. Valsalva ratio is on an average level.

Summary

There is a moderately increased stress level.
Baroreceptors sensitivity is on an average level.
There is a significantly decreased level of adaptability
There is a possibility of the beginning stage of some chronic problems. NOTE: It includes a possibility of chronic psycho-emotional problems.
