Orthotest	Valsalva Maneuver combined with Deep Breathing
Autonomic Nervous system activity is within the negative PSNS zone. Parasympathetic system activity is sharply decreased. There is a mild Sympathetic Hyper-Regulation in response to the orthostatic intervention. THE PSNS PORTION OF THE AUTONOMIC NERVOUS SYSTEM IS STABLE.	**Deep breathing vs. Normal breathing shows no improvement by the Parasympathetic activity. Valsalva ratio is on an average level.**

Summary

Baroreceptors sensitivity is on an average level.
There is a sharply decreased level of adaptability
There is a possibility of some chronic problems NOTE: It includes a possibility of chronic psycho-emotional problems.
