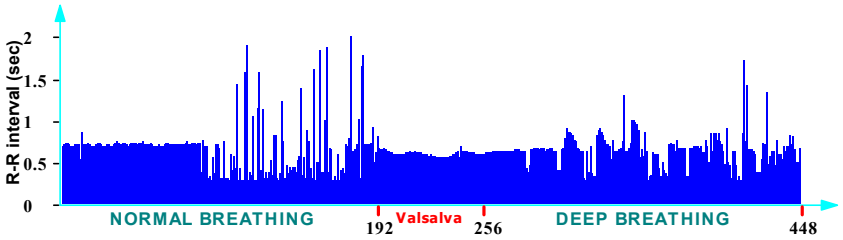
Michael Brennan

Assessment of ANS function during Valsalva Maneuver combined with Deep Breathing

2/28/2024 9:08:54 AM

Electrocardiographic Rhythm Strip



HR	R(HF)	R(LF1)	R(LF2)
88	28	13	1

Valsalva Maneuver

HR	R(HF)	R(LF1)	R(LF2)
85	13	11	13

Extrasystoles analysis

Single extrasystoles.

- Athletic level (>1.7)
- Average level (1.3 - 1.7)
- Low level (<1.3)

Valsalva Ratio 1.24

E/I Ratio 1.05

ANS ASSESSMENT (NORMAL BREATHING)	ANS ASSESSMENT (DEEP BREATHING)
PARASYMPATHETIC SYSTEM IS DECREASED MODERATELY WHILE SYMPATHETIC IS INCREASED SIGNIFICANTLY	PARASYMPATHETIC SYSTEM IS INCREASED MODERATELY WHILE SYMPATHETIC IS INCREASED MODERATELY

GRAPHICAL PRESENTATION OF THE ANS CONDITION

Michael Brennan

Interpretation of ANS assessment based on Heart Rate Variability

2/28/2024 9:08:54 AM

Orthotest	Valsalva Maneuver combined with Deep Breathing
Sympathetic activity is moderately elevated. Autonomic Nervous system activity is within the negative PSNS zone. THE PSNS PORTION OF THE AUTONOMIC NERVOUS SYSTEM IS STABLE. THE SNS PORTION OF THE AUTONOMIC NERVOUS SYSTEM I SWITCHED.	Deep breathing vs. Normal breathing sharply elevates the Parasympathetic activity. Deep breathing vs. Normal breathing shows a slight decrease of the Sympathetic activity.

Summary

There is a moderately increased stress level.
Deep breathing has slightly stabilized the Sympathetic function.
Valsalva test compared with Orthostatic test shows a sharp improvement of Parasympathetic function.
Autonomic function is close to the normal physiologic range.
There is a significantly decreased level of adaptability

* Final decision can be made ONLY by combining ANS assessment conclusions with clinical data!
