Assessment of the transition period

Min HR - 95

Max HR - 105

Chronotropic reaction HR (supine) / Max HR	0.88
Compensation response Min HR / Max HR	0.90
Ortho-Test Ratio RR average Supine vs RR average Upright	1.12

Conclusion :

CHRONOTROPIC REACTION DECREASES SHARPLY IN RESPONSE TO ORTHOTEST WHILE VASCULAR COMPENSATION IS ABSENT

Interpretation of ANS assessment based on Heart Rate Variability

6/12/2024 3:56:13 PM

Orthotest	Valsalva Maneuver combined with Deep Breathing
Sympathetic activity is moderately elevated. **Autonomic Nervous system activity is within the negative PSNS zone.** **Parasympathetic system activity is sharply decreased.** **THE PSNS PORTION OF THE AUTONOMIC NERVOUS SYSTEM IS STABLE.**	**Deep breathing vs. Normal breathing shows no improvement by the Parasympathetic activity.** **Valsalva ratio is on an average level.**

Summary

There is a moderately increased stress level.
Baroreceptors sensitivity is on an average level.
There is a sharply decreased level of adaptability
There is a possibility of some chronic problems.
