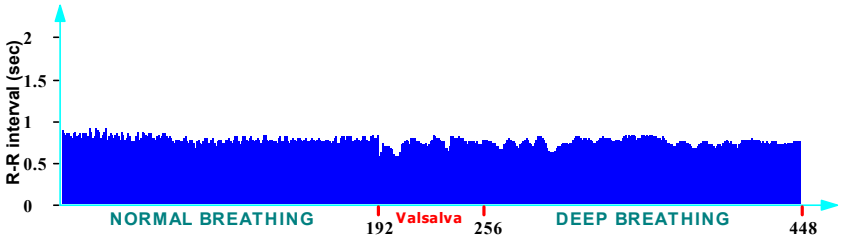
Assessment of ANS function during Valsalva Maneuver combined with Deep Breathing

3/25/2021 4:03:49 PM

Electrocardiographic Rhythm Strip



HR	R(HF)	R(LF1)	R(LF2)
75	20	29	30

Valsalva Maneuver

HR	R(HF)	R(LF1)	R(LF2)
79	27	26	26

Extrasystoles analysis

Extrasystoles not recognized

- Athletic level (>1.7)
- Average level (1.3 - 1.7)
- Low level (<1.3)

Valsalva Ratio 1.42

E/I Ratio 1.11

ANS ASSESSMENT (NORMAL BREATHING)	ANS ASSESSMENT (DEEP BREATHING)
INFLUENCE OF SYMPATHETIC SYSTEM PREVAILS SLIGHTLY WHILE PARASYMPATHETIC ON AVERAGE LEVEL	PARASYMPATHETIC SYSTEM IS DECREASED MODERATELY WHILE SYMPATHETIC IS INCREASED SLIGHTLY

GRAPHICAL PRESENTATION OF THE ANS CONDITION

Interpretation of ANS assessment based on Heart Rate Variability

3/25/2021 4:03:49 PM

Orthotest	Valsalva Maneuver combined with Deep Breathing
There is a mild Sympathetic Hyper-Regulation in response to the orthostatic intervention. There is a severe PSNS Hyper-Regulation in response to the orthostati intervention.	Deep breathing vs. Normal breathing shows negative changes by the Parasympathetic activity. Deep breathing vs. Normal breathing shows no changes by the Sympathetic activity. Valsalva ratio is on an average level.

Summary

Baroreceptors sensitivity is on an average level.
Moderate or severe PSNS Hyper-Regulation during orthostatic test is related for up to 80% of cases with gastrointestinal(GI) system problems and up to 20% with syncope, dizziness and vestibular deregulation.
NOTE: High correlation of the PSNS imbalance with GI system problems is based on a highly involving Vagus nerve activity in GI system innervations.
There is a possibility of the beginning stage of some chronic problems. NOTE: It includes a possibility of chronic psycho-emotional problems.

* Final decision can be made ONLY by combining ANS assessment conclusions with clinical data!
