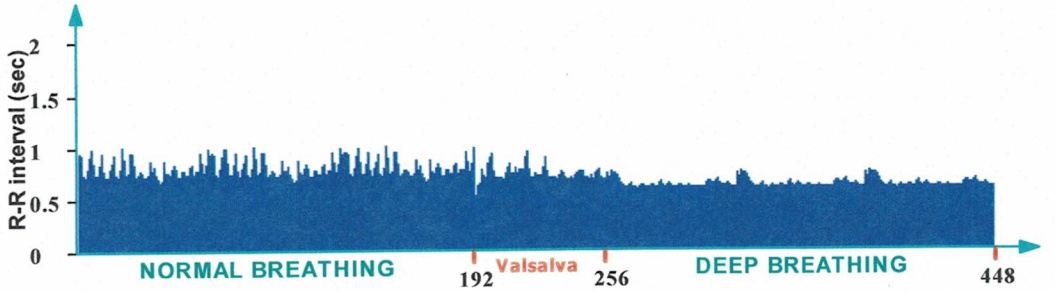
Assessment of ANS function during Valsalva Maneuver combined with Deep Breathing

11/13/2019 2:34:00 PM

Electrocardiographic Rhythm Strip



HR	R(HF)	R(LF1)	R(LF2)
75	12	20	18

Valsalva Maneuver

HR	R(HF)	R(LF1)	R(LF2)
94	26	27	26

Extrasystoles analysis

Extrasystoles not recognized

- Athletic level (>1.7)
- Average level (1.3 - 1.7)
- Low level (<1.3)

Valsalva Ratio 1.13

E/I Ratio 1.06

ANS ASSESSMENT (NORMAL BREATHING)	ANS ASSESSMENT (DEEP BREATHING)
HF(PSNS) is increased moderately while LF (SNS) is increased slightly	HF(PSNS) is decreased moderately while LF (SNS) is increased significantly

GRAPHICAL PRESENTATION OF THE ANS CONDITION

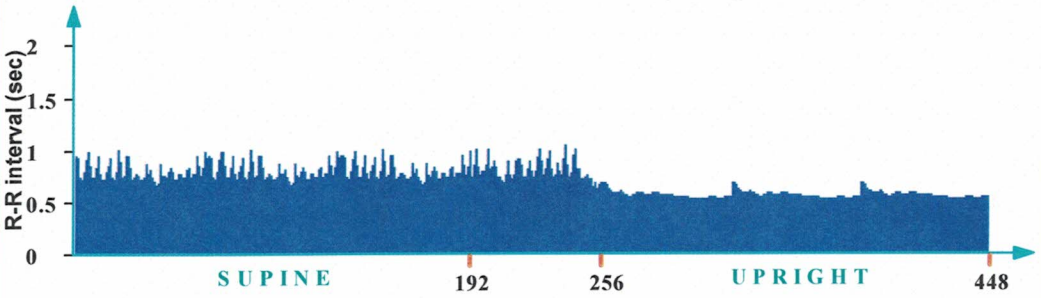
Assessment of the Physical Fitness Level

11/13/2019 2:31:38 PM



Assessment of the transition period

Min HR - 100

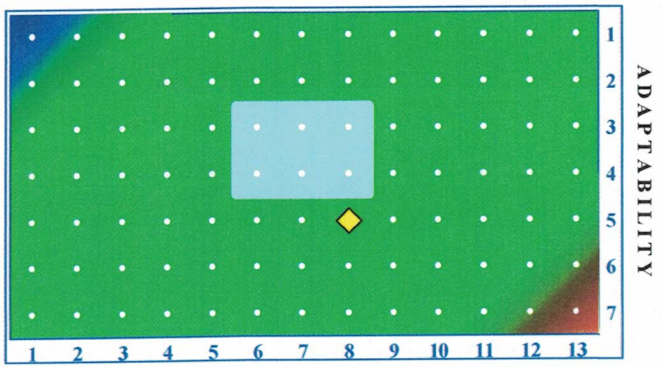
Max HR - 100

Chronotropic reaction HR (supine) / Max HR	0.76
Compensation response Min HR / Max HR	1.00
Ortho-Test Ratio RR average Supine vs RR average Upright	1.41

Conclusion :

CHRONOTROPIC REACTION DECREASES MODERATELY IN RESPONSE TO ORTHOTEST WHILE VASCULAR COMPENSATION IS ABSENT

Graphical Presentation of the Physical Fitness



1/1 - The best Physical Fitness

13/7 - The worst Physical Fitness

- Athletic zone
- Normal zone
- Below normal
- Current Physical Fitness

Physical Fitness Level - 8/5

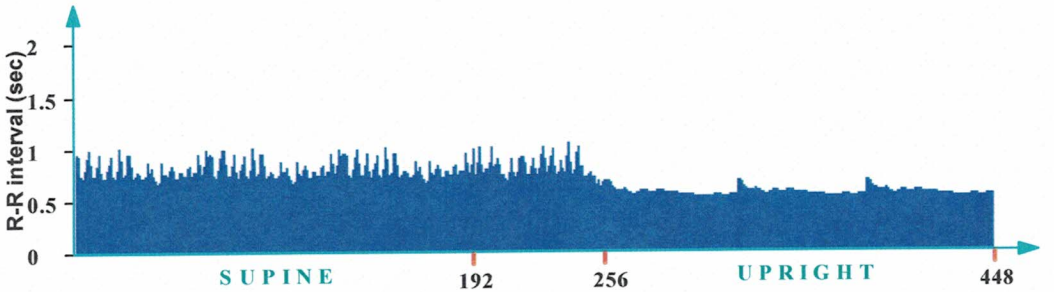
Physical Fitness evaluation based on Heart Rate Variability analysis

11/13/2019 2:31:38 PM

Electrocardiographic Rhythm Strip



HR	SDNN	TI	SC1	SC2	SC3
75	78	84	6	13	10

HR	SDNN	TI	SC1	SC2	SC3
106	29	545	14	15	4

Extrasystoles analysis

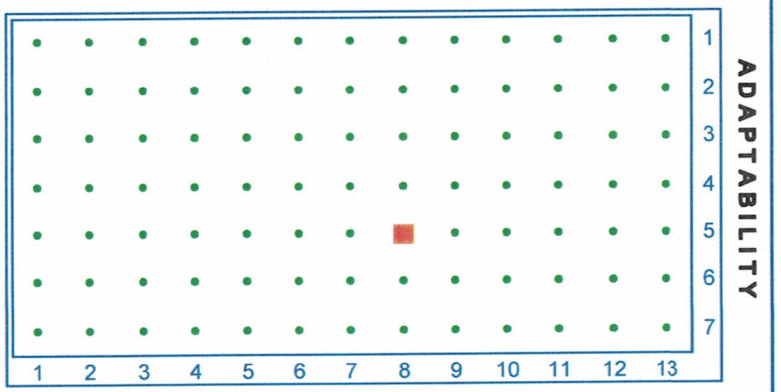
Extrasystoles not recognized

Transition parameters

ChMR	30/15	Iot
0.76	1.00	1.41

Parameters of Optimal Variability	Equilibrium Assessment
POV (SUPINE) = 23 POV (UPRIGHT) = 6	Index of discrepancy = 13

Current Physical Fitness - 8/5



13 LEVELS OF FUNCTIONING OF THE PHYSIOLOGICAL SYSTEMS

Point (1/1) - The best possible Physical Fitness

Point (13/7) - The worst possible Physical Fitness

CONCLUSION

THE FUNCTIONING OF PHYSIOLOGICAL SYSTEMS IS CLOSE TO THE AVERAGE LEVEL, WHILE THE ADAPTATION RESERVE IS MODERATELY REDUCED

Interpretation of ANS assessment based on Heart Rate Variability

11/13/2019 2:31:38 PM

Orthotest	Valsalva Maneuver combined with Deep Breathing
There is a mild Sympathetic Hyper-Regulation in response to the orthostatic intervention. There is a severe PSNS Hyper-Regulation in response to the orthostati intervention.	Deep breathing vs. Normal breathing shows negative changes by the Parasympathetic activity. Deep breathing vs. Normal breathing moderately elevates Sympathetic activity.

Summary

Valsalva maneuver combined with Deep breathing shows a moderate reserve of Sympathoadrenergic function.
Autonomic function is close to the normal physiologic range.
There is a slightly decreased level of adaptability
Moderate or severe PSNS Hyper-Regulation during orthostatic test is related for up to 80% of cases with gastrointestinal(GI) system problems and up to 20% with syncope, dizziness and vestibular deregulation.
NOTE: High correlation of the PSNS imbalance with GI system problems is based on a highly involving Vagus nerve activity in GI system innervations.

* Final decision can be made ONLY by combining ANS assessment conclusions with clinical data!
