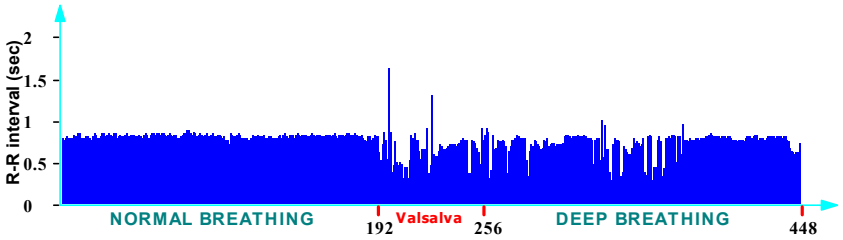
Assessment of ANS function during Valsalva Maneuver combined with Deep Breathing

12/15/2022 4:09:36 PM

Electrocardiographic Rhythm Strip



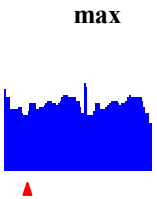
HR	R(HF)	R(LF1)	R(LF2)
72	24	27	30

Valsalva Maneuver

HR	R(HF)	R(LF1)	R(LF2)
78	21	20	15

Extrasystoles analysis

Extrasystoles not recognized



- Athletic level (>1.7)
- Average level (1.3 - 1.7)
- Low level (<1.3)

Valsalva Ratio 1.56

E/I Ratio 1.12

ANS ASSESSMENT (NORMAL BREATHING)	ANS ASSESSMENT (DEEP BREATHING)
PARASYMPATHETIC SYSTEM IS DECREASED SLIGHTLY WHILE SYMPATHETIC IS INCREASED SLIGHTLY	INFLUENCE OF SYMPATHETIC SYSTEM PREVAILS SLIGHTLY WHILE PARASYMPATHETIC ON AVERAGE LEVEL

GRAPHICAL PRESENTATION OF THE ANS CONDITION

Crystal Fernandez

Interpretation of ANS assessment based on Heart Rate Variability

12/15/2022 4:09:36 PM

Orthotest	Valsalva Maneuver combined with Deep Breathing
There is a mild Sympathetic Hyper-Regulation in response to the orthostatic intervention. **THE PSNS PORTION OF THE AUTONOMIC NERVOUS SYSTEM IS SWITCHED.**	**Deep breathing vs. Normal breathing slightly elevates the Parasympathetic activity.** **Deep breathing vs. Normal breathing shows no changes by the Sympathetic activity.** **Valsalva ratio is on an average level.**

Summary

There is a significant evidence of individual psycho emotional status. NOTE: There is a paradoxical response on orthostatic test: PSNS "Upright" is better than PSNS "Supine".
Baroreceptors sensitivity is on an average level.
There is a significantly decreased level of adaptability

* **Final decision can be made ONLY by combining ANS assessment conclusions with clinical data!**
