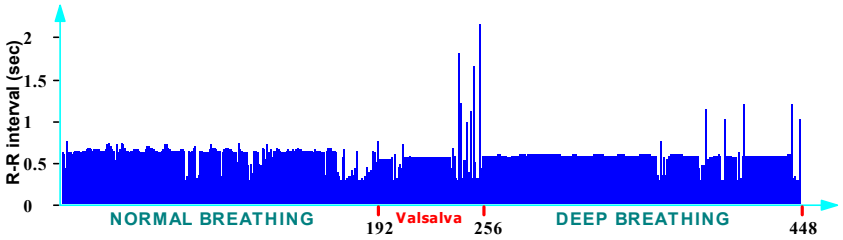
Cynthia Thompson

Assessment of ANS function during Valsalva Maneuver combined with Deep Breathing

9/19/2023 5:17:47 PM

Electrocardiographic Rhythm Strip



HR	R(HF)	R(LF1)	R(LF2)
92	28	29	29

Valsalva Maneuver

HR	R(HF)	R(LF1)	R(LF2)
100	30	30	29

Extrasystoles analysis

Single extrasystoles.

- Athletic level (>1.7)
- Average level (1.3 - 1.7)
- Low level (<1.3)

Valsalva Ratio 1.11

E/I Ratio 1.03

ANS ASSESSMENT (NORMAL BREATHING)	ANS ASSESSMENT (DEEP BREATHING)
PARASYMPATHETIC SYSTEM IS DECREASED SIGNIFICANTLY WHILE SYMPATHETIC IS INCREASED MODERATELY	PARASYMPATHETIC SYSTEM IS DECREASED SHARPLY WHILE SYMPATHETIC IS INCREASED SIGNIFICANTLY

GRAPHICAL PRESENTATION OF THE ANS CONDITION

Cynthia Thompson

Interpretation of ANS assessment based on Heart Rate Variability

9/19/2023 5:17:47 PM

Orthotest	Valsalva Maneuver combined with Deep Breathing
Sympathetic activity is moderately elevated. Autonomic Nervous system activity is within the negative PSNS zone.	Deep breathing vs. Normal breathing shows negative changes by the Parasympathetic activity.

Summary

There is a moderately increased stress level.
There is an evidence of significantly decreased sensitivity of Parasympathetic receptors.
There is a sharply decreased level of adaptability
There is a possibility of some chronic problems NOTE: It includes a possibility of chronic psycho-emotional problems.
BE MORE ATTENTIVE TO THIS PATIENT

* Final decision can be made ONLY by combining ANS assessment conclusions with clinical data!
