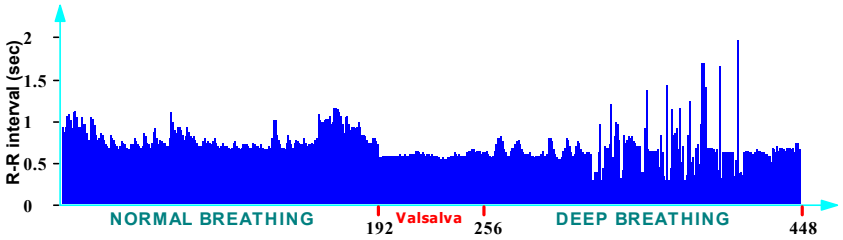
Assessment of ANS function during Valsalva Maneuver combined with Deep Breathing

8/17/2023 10:31:37 AM

Electrocardiographic Rhythm Strip



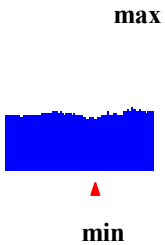
HR	R(HF)	R(LF1)	R(LF2)
74	19	26	26

Valsalva Maneuver

HR	R(HF)	R(LF1)	R(LF2)
88	25	26	24

Extrasystoles analysis

Single extrasystoles.



- Athletic level (>1.7)
- Average level (1.3 - 1.7)
- Low level (<1.3)

Valsalva Ratio 1.20

E/I Ratio 1.25

ANS ASSESSMENT (NORMAL BREATHING)	ANS ASSESSMENT (DEEP BREATHING)
INFLUENCE OF SYMPATHETIC SYSTEM PREVAILS SLIGHTLY WHILE PARASYMPATHETIC ON AVERAGE LEVEL	PARASYMPATHETIC SYSTEM IS DECREASED MODERATELY WHILE SYMPATHETIC IS INCREASED MODERATELY

GRAPHICAL PRESENTATION OF THE ANS CONDITION

Interpretation of ANS assessment based on Heart Rate Variability

8/17/2023 10:31:37 AM

Orthotest	Valsalva Maneuver combined with Deep Breathing
There is a mild Sympathetic Hyper-Regulation in response to the orthostatic intervention. **There is a moderate PSNS Hyper-Regulation in response to the orthostatic intervention.**	**Deep breathing vs. Normal breathing shows negative changes by the Parasympathetic activity.** **Deep breathing vs. Normal breathing slightly elevates the Sympathetic activity.**

Summary

Valsalva maneuver combined with Deep breathing shows a slight reserve of the Sympathoadrenergic function.
Moderate or severe PSNS Hyper-Regulation during orthostatic test is related for up to 80% of cases with gastrointestinal(GI) system problems and up to 20% with syncope, dizziness and vestibular deregulation.
NOTE: High correlation of the PSNS imbalance with GI system problems is based on a highly involving Vagus nerve activity in GI system innervations.
There is a possibility of the beginning stage of some chronic problems. NOTE: It includes a possibility of chronic psycho-emotional problems.

* **Final decision can be made ONLY by combining ANS assessment conclusions with clinical data!**
