Interpretation of ANS assessment based on Heart Rate Variability

7/26/2023 4:24:56 PM

Orthotest	Valsalva Maneuver combined with Deep Breathing
Sympathetic activity is moderately elevated. **There is a mild PSNS Hyper-Regulation in response to the orthostatic intervention.** **Autonomic Nervous system activity is within the negative PSNS zone.** **There is a moderate prevalence of the Sympathetic activity.** **THE SNS PORTION OF THE AUTONOMIC NERVOUS SYSTEM I STABLE.**	**Deep breathing vs. Normal breathing shows negative changes by the Parasympathetic activity.** **Valsalva ratio is on a high level.**

Summary

There is a moderately increased stress level.
Baroreceptors sensitivity is on a high level.
There is a sharply decreased level of adaptability
There is a possibility of the beginning stage of some chronic problems. NOTE: It includes a possibility of chronic psycho-emotional problems.
